THE DECOR STYLE

Rich sensory design has been a Decor speciality for over 40 years. The decorative and acoustic panel masterpieces of Decor have helped shape the horizon of modern architecture and design, and form the backdrop of everyday Australian adventures.

Decor style is defined by the ingenious innovation and charm that its glamorous panel collections have become known for. After four decades of evolution and revolution, the values of Decor still ring true. A globally connected family owned and operated business in its third generation, the passion for creating the world's most original built environments runs in the family, and is stronger than ever.

A key element of the Decor experience has always been exceptional and memorable service. True to form, Decor has introduced digital tools to serve the creative process of modern architects and designers. New advancements in acoustic management have been brought to life in world-first seamless acoustic panelling systems, and bold steps forward are being taken in design possibilities. You can see visions come to life when working with Decor.

As a FSC and GECA certified company, Decor Systems welcomes regular audits to ensure high standards are maintained. Decor products are very accessible and easy to specify. Careful management throughout the whole process of purchasing, warehousing, production, delivery, and after sales service reinforces the ethos of a long-established company committed to serving both our customers and the environment we share together.

MISSION

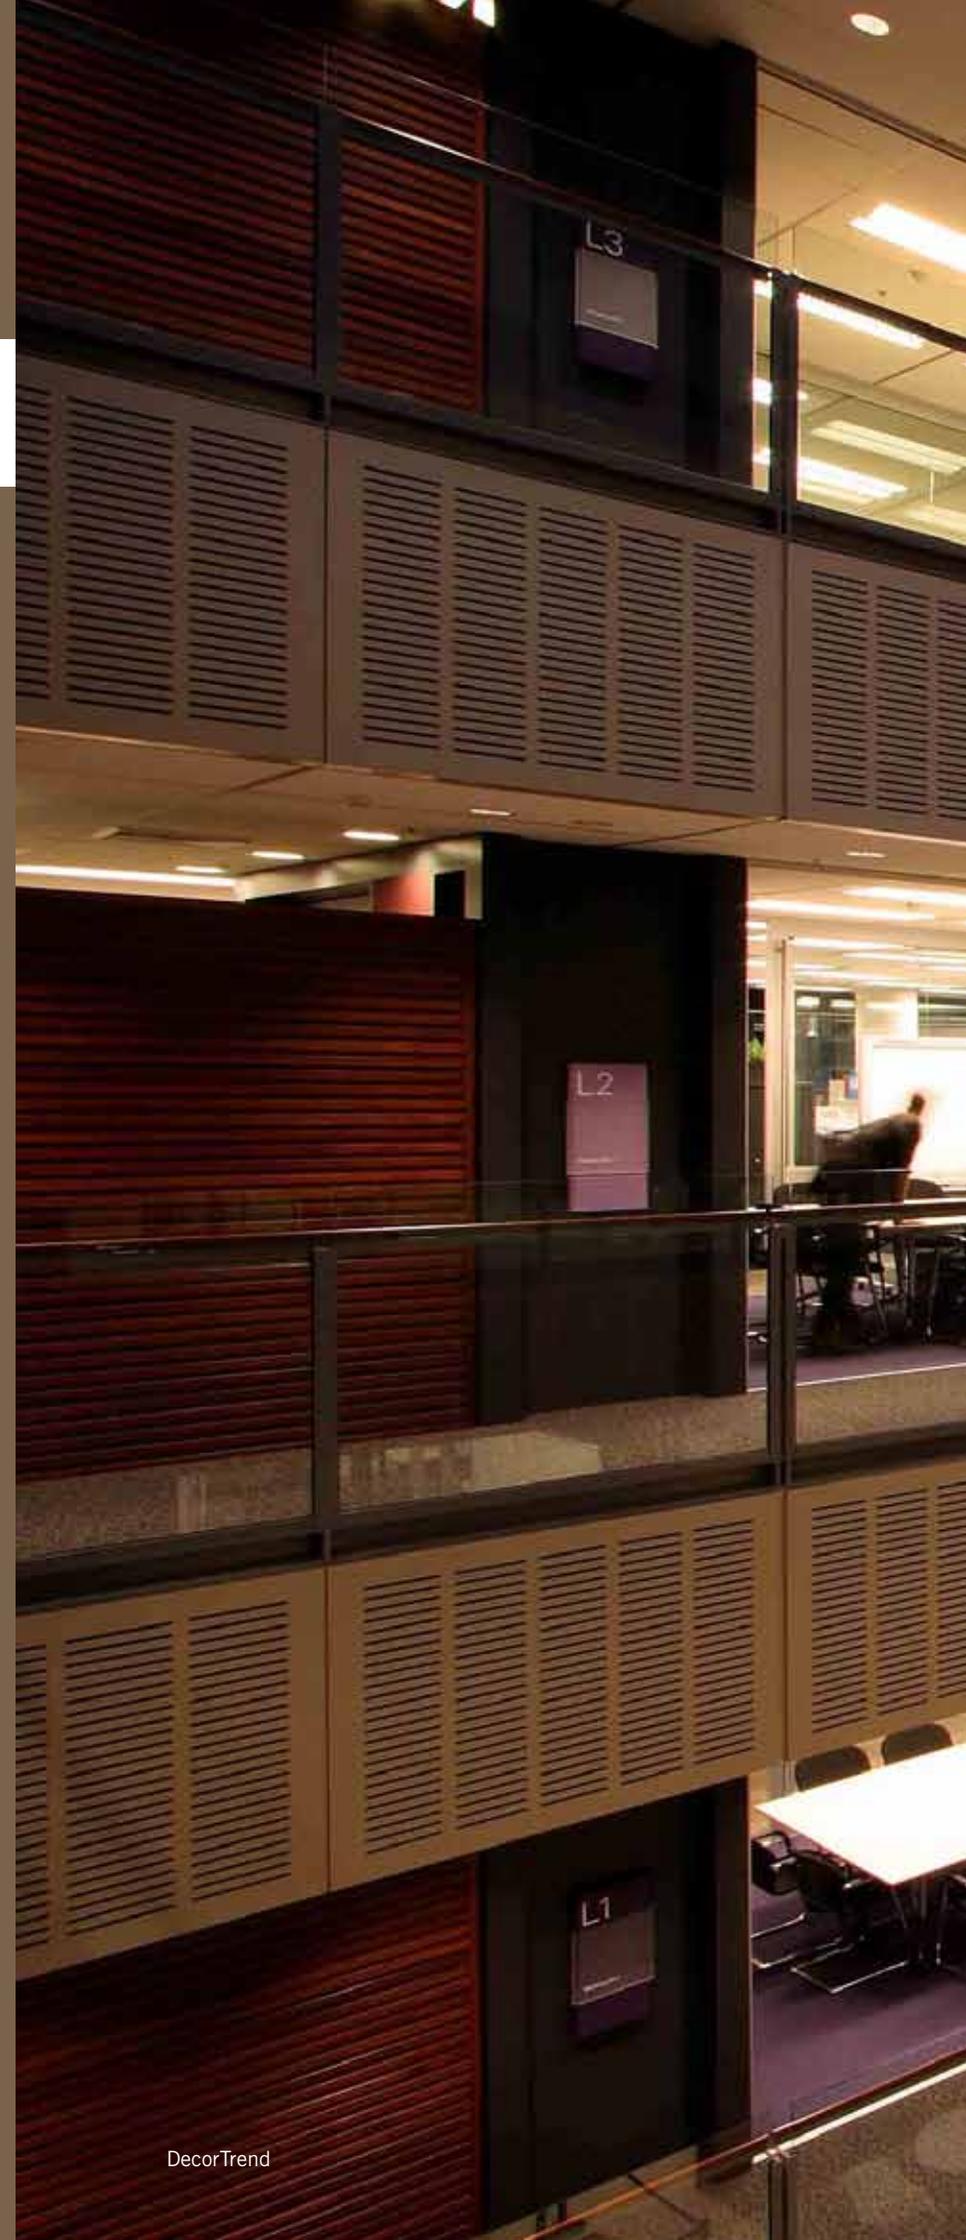

At Decor, our everyday mission is to work collaboratively with our customers to make sure their vision for their built environment is fulfilled. We promise to listen, ensuring our solution meets the needs of the surroundings and its inhabitants, increasing their quality of life. From an unnoticed silence to an unmissable feature piece, we make it perfect.

We create atmospheres. We create tranquillity. We do this through the design and application of both acoustic panelling, and feature panelling that is nothing short of stunning.

Our mission is to serve the senses. Our systems are visually enticing, functional, and gentle on the ears. We are perpetually creating, and developing, challenging, and growing.

We design thoughtfully, with varied product benefits offering you better airflow, control over light and vision, and an aesthetic that is sought after for contemporary art and design.

You can expect excellent teamwork and profound understanding of industrial requirements. Our team works hard to provide you with the freedom of customisation, great value, and flawless craftsmanship. Count on it.

OUR STORY BEGINS MORE THAN 50 YEARS AGO...

The First Generation: Idea

The idea of perforated panels were first conceived by Robert Faulkes when, as a young man, he was working with Australia's then-biggest Roof & Building Services, working on iconic projects such as the Sydney Opera House and as far afield as Papua New Guinea.

His mentors at Roof & Building Services encouraged Robert to further explore this unique idea. And so it was that in 1969, Robert moved to a company where he developed slotted eave sheets for better air circulation, the very first perforated panels Australia had ever seen. Robert's young son, David, was fascinated by his father's work, visiting the factory during his school holidays to learn all that he could about the machines and products.

The Second Generation: Function

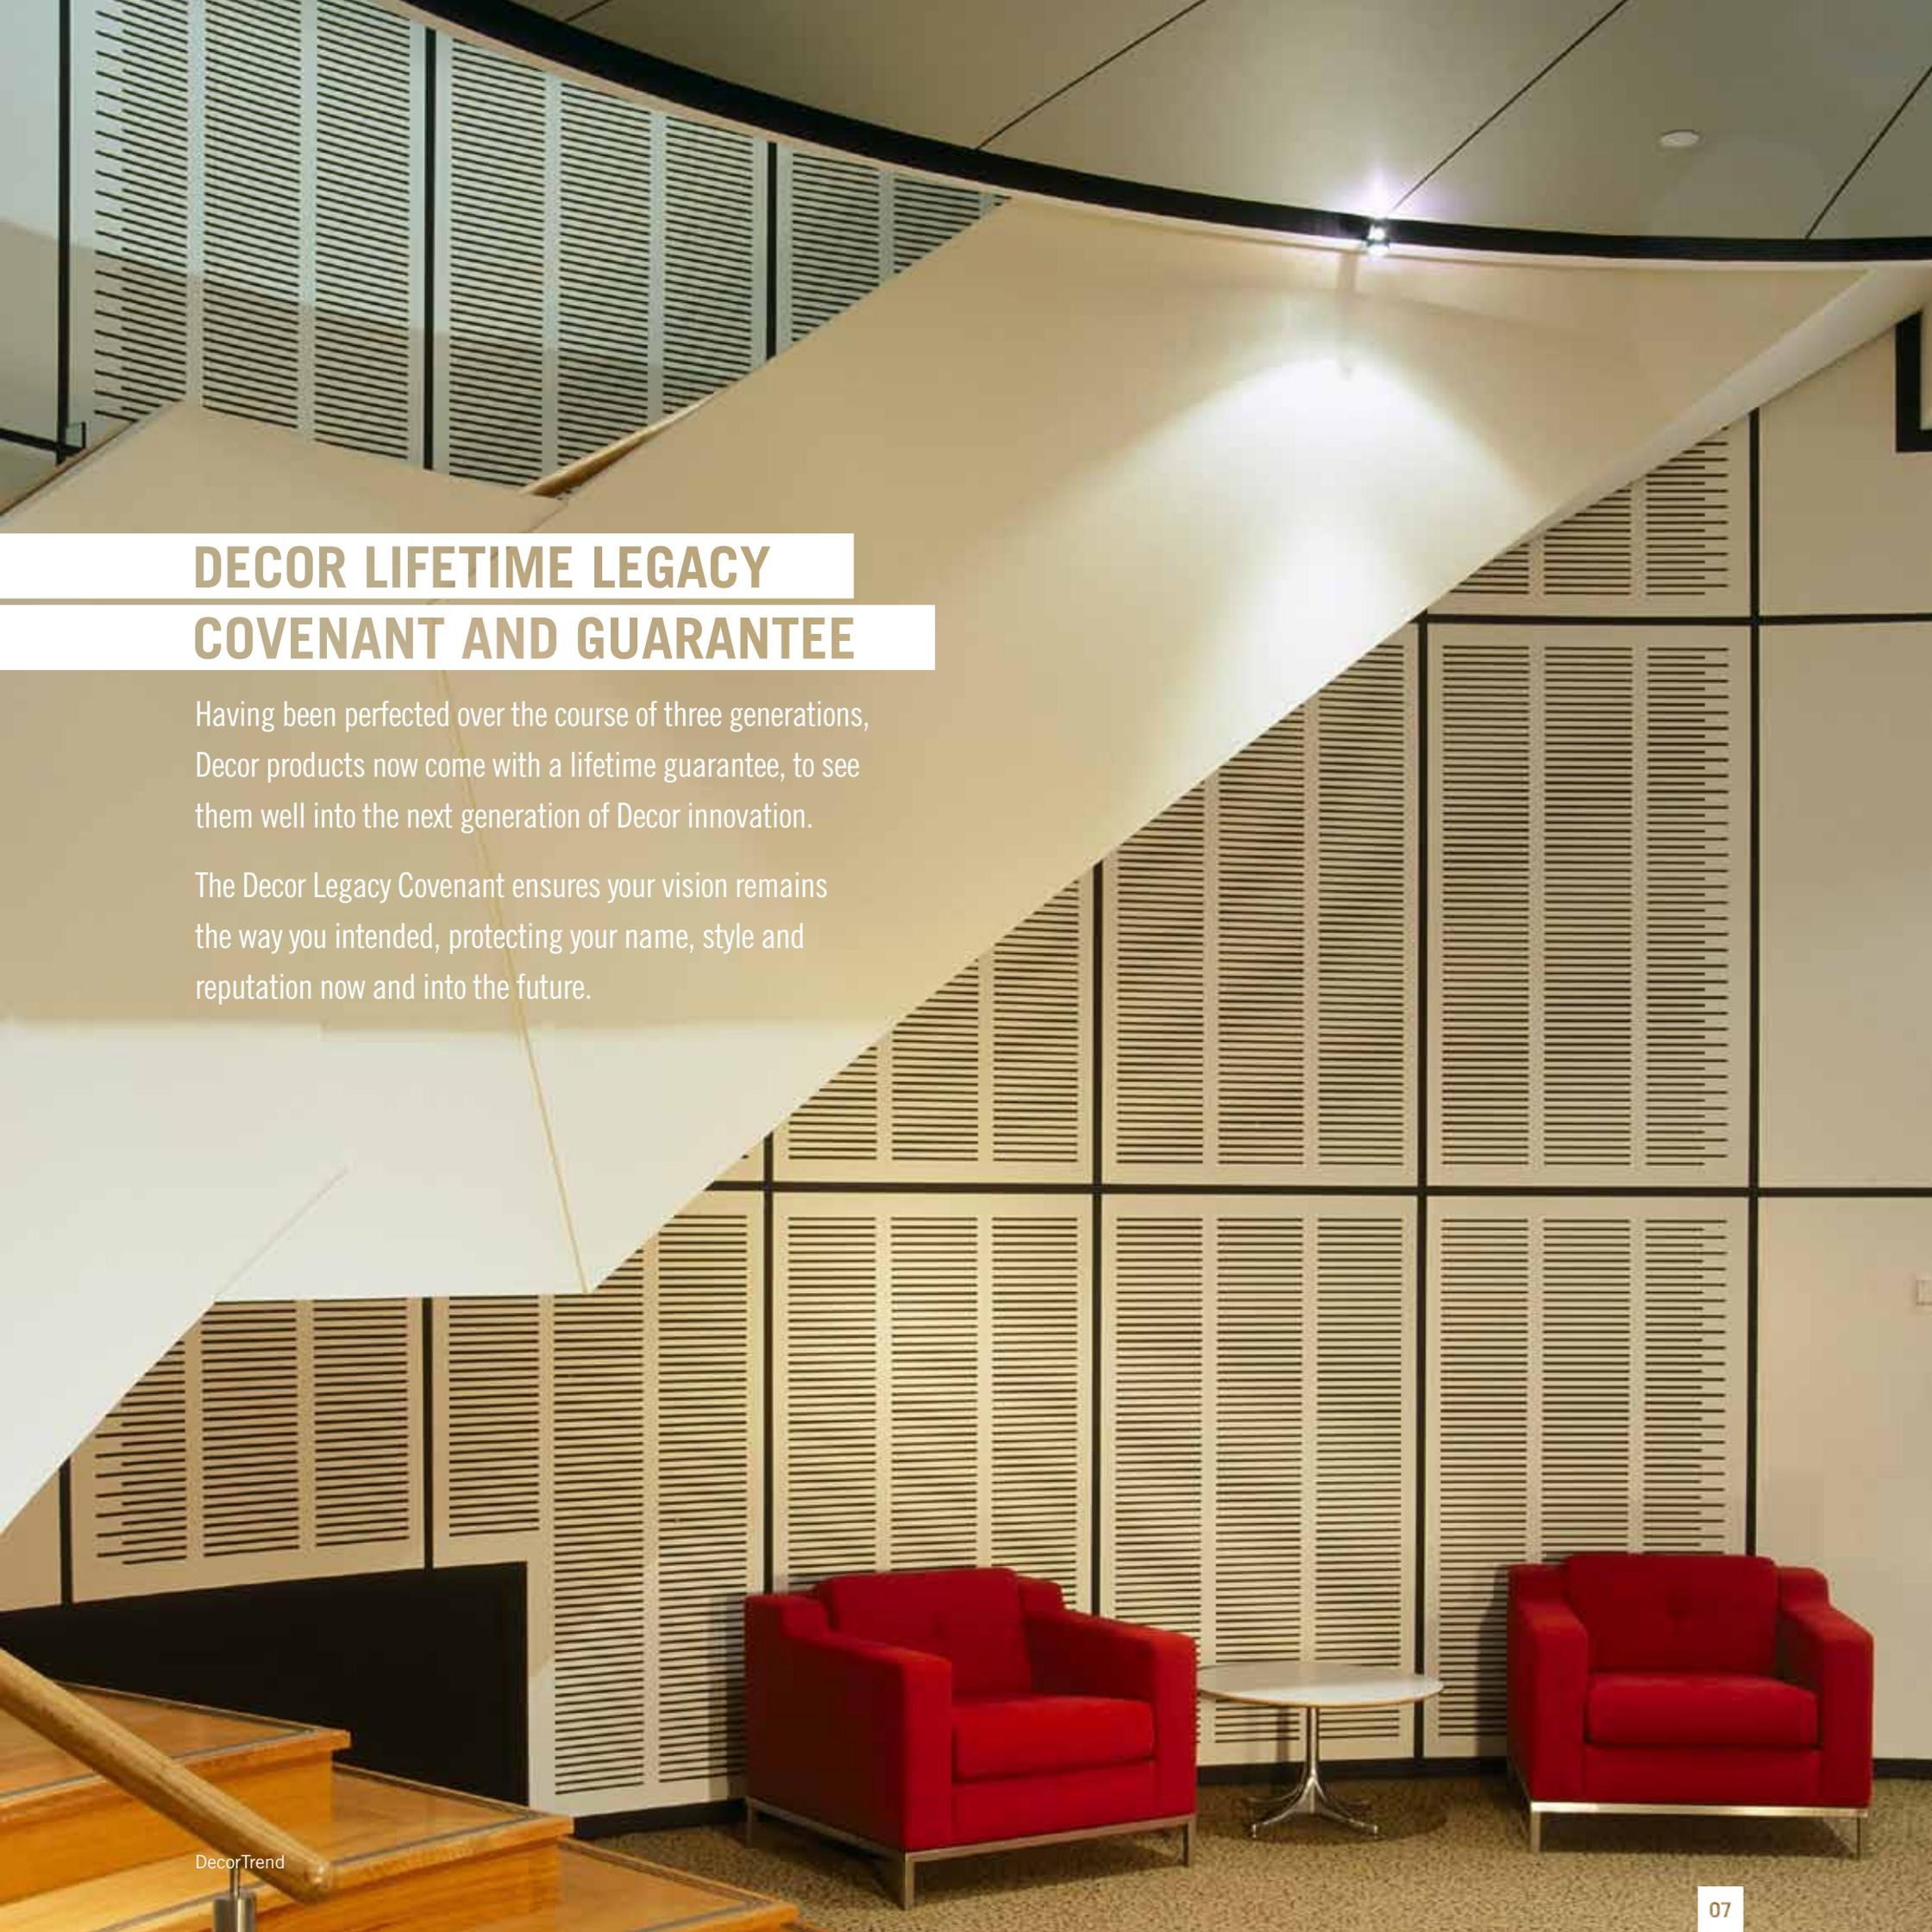

The 1980's saw David Faulkes develop strong bonds with the commercial construction sector, as he expanded into the supply and fabrication of fibre cement products, carrying on the family legacy. But something was missing. David had an unquenchable desire to introduce perforated panels to interior environments. His industry relationships confirmed this direction, driving his ambition to revolutionise perforated panels into beautifully designed, acoustically functional works of art.

Once David realised the enormous benefits of perforated panels as acoustic controllers, he busily set about developing a collection of scientifically tested panels which offered high acoustic ratings and striking design. In the way David had visited his father in the factory many years earlier, David's own son, Mitchell, born with the family passion, visited David at the design studio during his school holidays to contribute original designs.

The Third Generation: Sustainability

Having grown up as a member of the environmentally conscious generation, Mitchell earned his place at Decor, securing Good Environmental Choice Australia (GECA) accreditation as well as a Certification by the Forestry Stewardship Council (FSC). Mitchell inherited his father's passion for design, developing new products each year to add to the Decor collection. Thanks to the father-son partnership, Decor products are now strikingly fashionable, acoustically functional, and extraordinarily sustainable. Many Decor products use a large percentage of recycled content, contributing to modern standards of green ratings, featuring in some of the leading examples of contemporary sustainable architecture.

Having been perfected over the course of three generations, Decor products now come with a lifetime guarantee, to see them well into the next generation of Decor innovation.

DECOR LIFETIME LEGACY COVENANT AND GUARANTEE

Having been perfected over the course of three generations, Decor products now come with a lifetime guarantee, to see them well into the next generation of Decor innovation.

The Decor Legacy Covenant ensures your vision remains the way you intended, protecting your name, style and reputation now and into the future.

MANUFACTURING

Our expert designers and technical team do all of our designing and machining in-house. It's the ideas, research and inspiration that come from all corners of the globe.

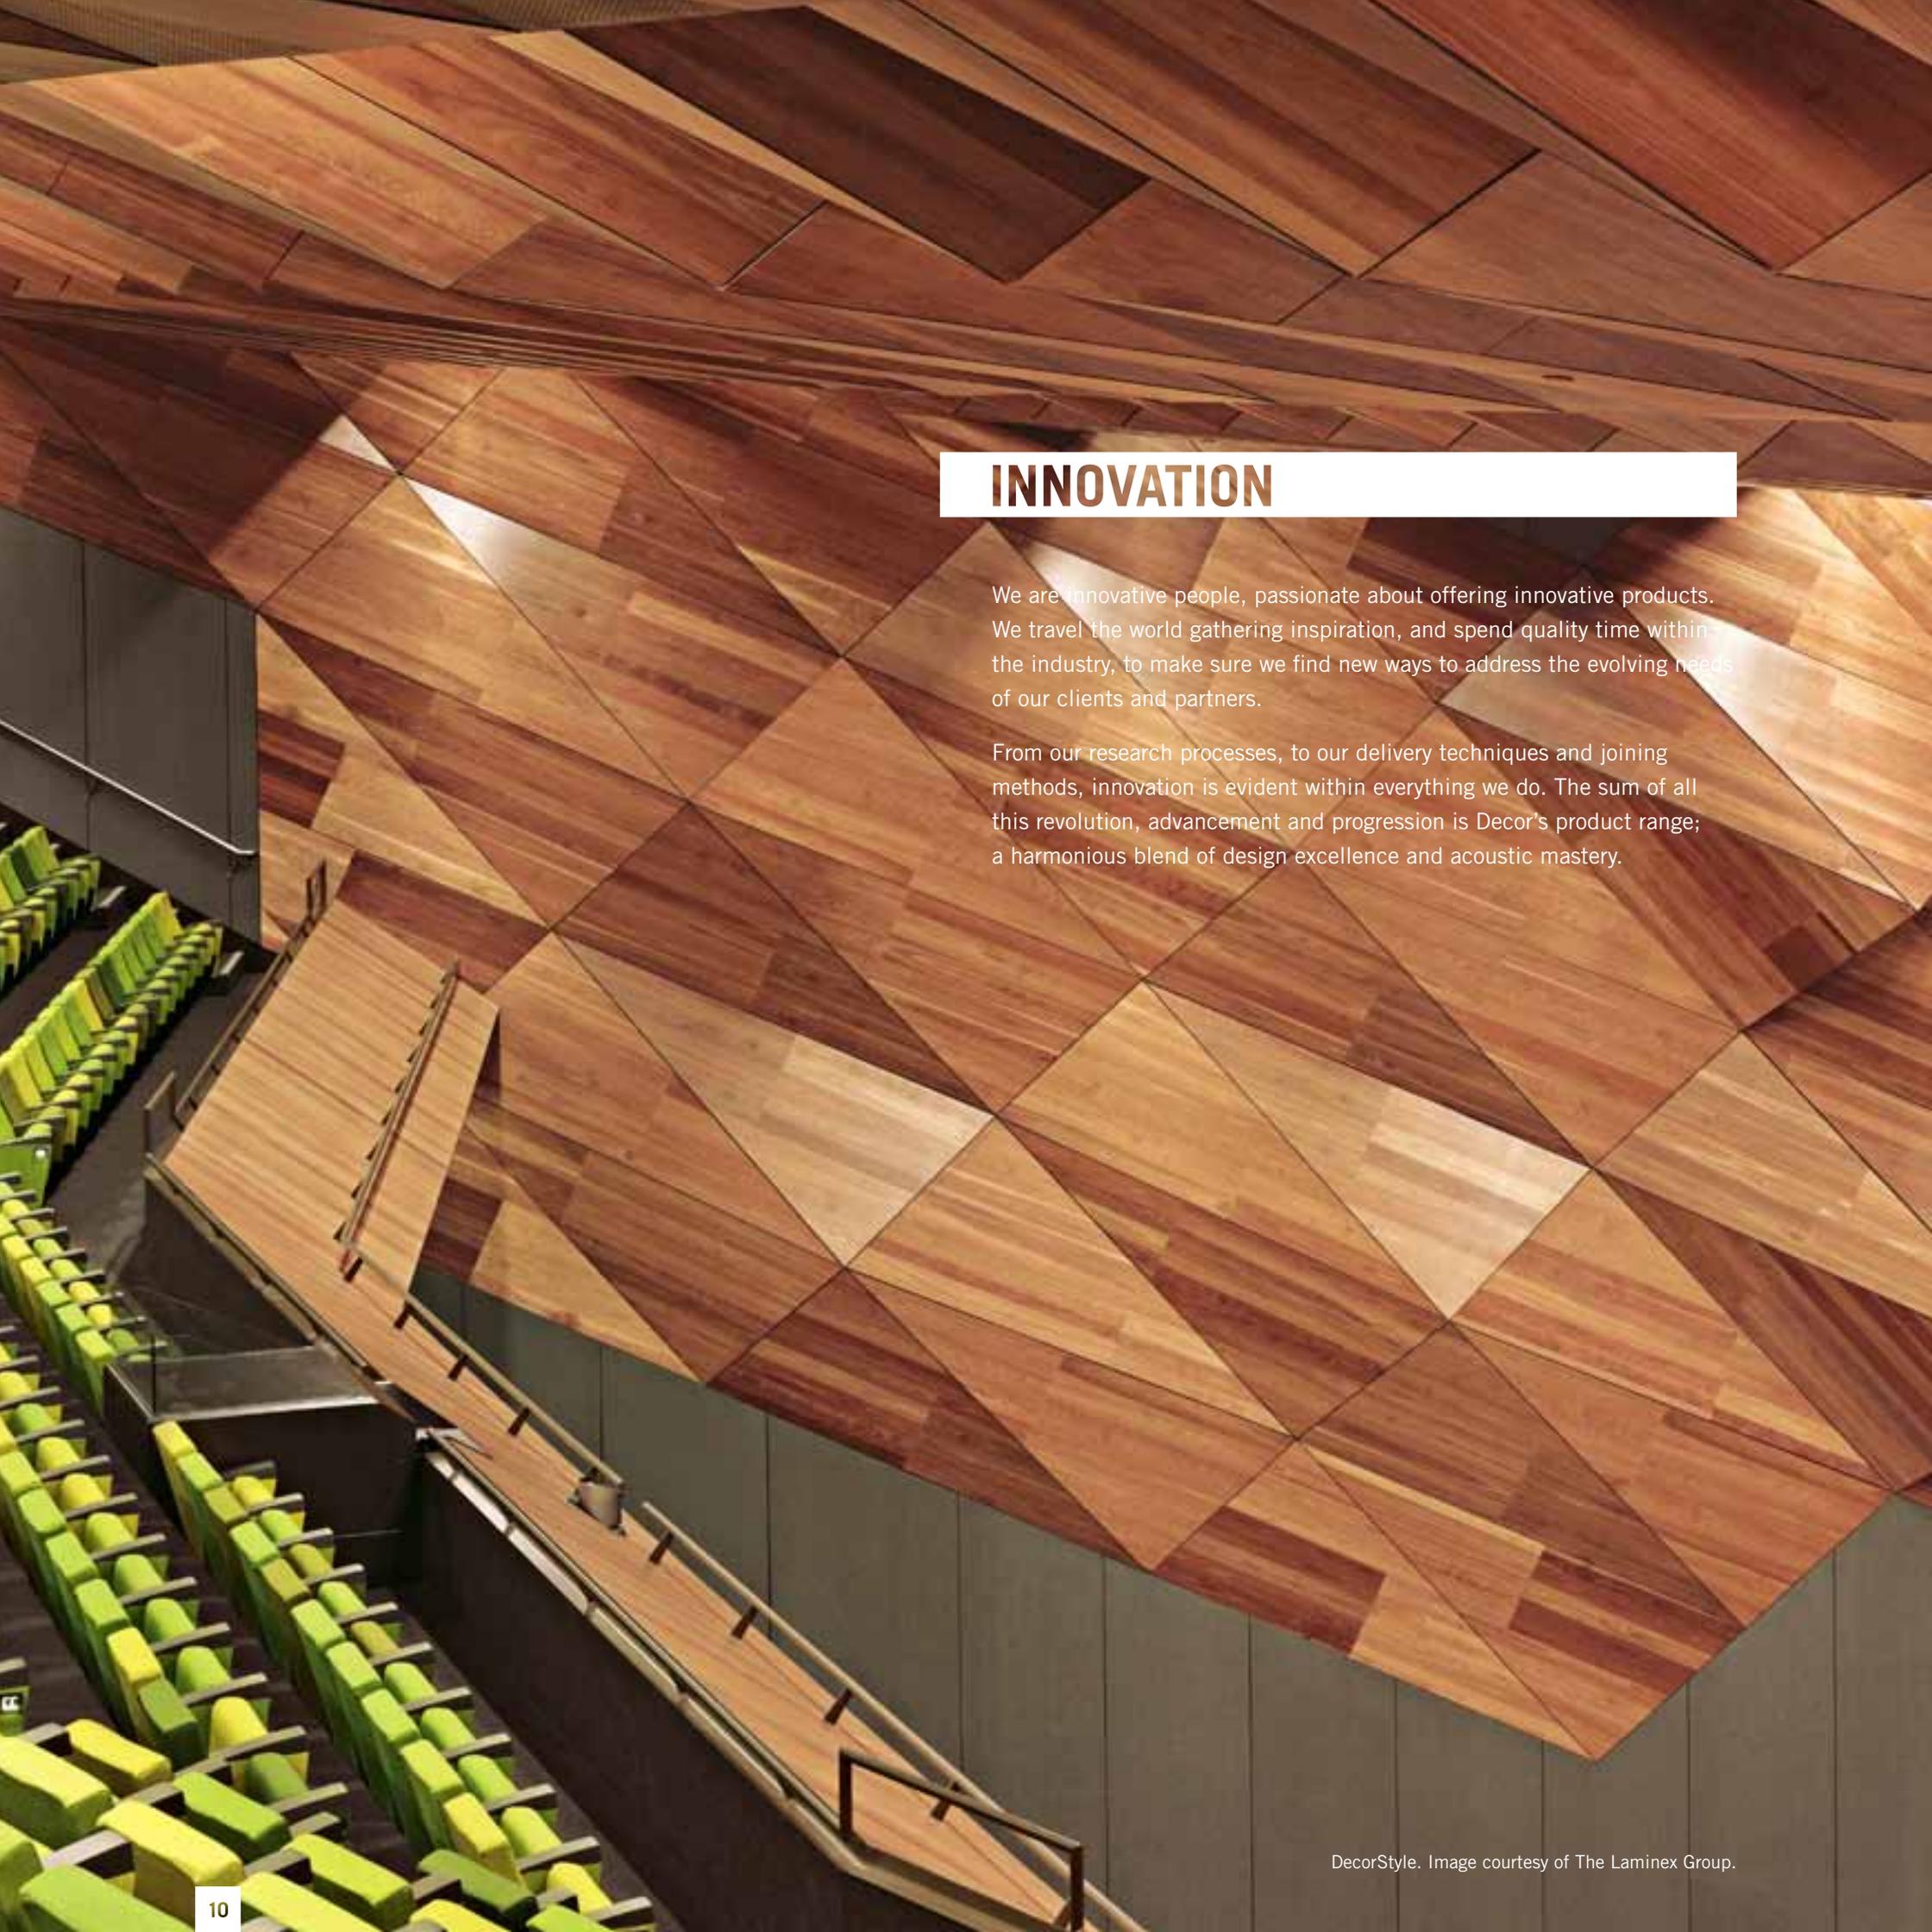

Inside the walls of the purpose-built factories and state-of-the-art facilities, a passionate team works meticulously on every detail of your order, right down to the way it is packed and labelled. This fastidious attention to quality control is an attribute shared across all departments, extending to the sales team as they work closely with the production team to ensure total alignment of vision.

Panels lining the walls of French hotels; the sparkling backdrops of New York fashion runways; acoustic reinforcement in the Italian opera- these panels were all imagined and crafted in the central manufacturing plant, right here in Australia.

In a place where camaraderie is high and staff turnover is nil. A place where skill is in abundance, only requiring outsourcing to trusted partners in cases where highly specialised finishing is required to perfect the project. A place alive with the spirit of three generations and all who have been a part of making Decor panels what they are today: breathtaking.

The image shows a large, modern interior space, likely a stadium or arena. The ceiling is the most prominent feature, composed of numerous wooden panels arranged in a complex, geometric pattern of triangles and polygons. The wood has a warm, natural tone. Below the ceiling, rows of bright green stadium seats are visible, arranged in a curved pattern. The overall atmosphere is one of modern design and innovation.

INNOVATION

We are innovative people, passionate about offering innovative products. We travel the world gathering inspiration, and spend quality time within the industry, to make sure we find new ways to address the evolving needs of our clients and partners.

From our research processes, to our delivery techniques and joining methods, innovation is evident within everything we do. The sum of all this revolution, advancement and progression is Decor's product range; a harmonious blend of design excellence and acoustic mastery.

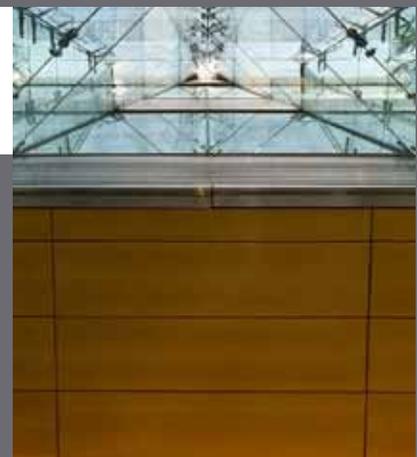

Innovation lives in Decor's newest development, a seamless acoustic system offering flawlessly smooth faux-plaster finish, with a superior acoustic rating. Until this revolution in acoustic management, incidental noise was absorbed in open area perforations, making minimalist design difficult to accomplish in noisy areas.

Style

SMOOTH

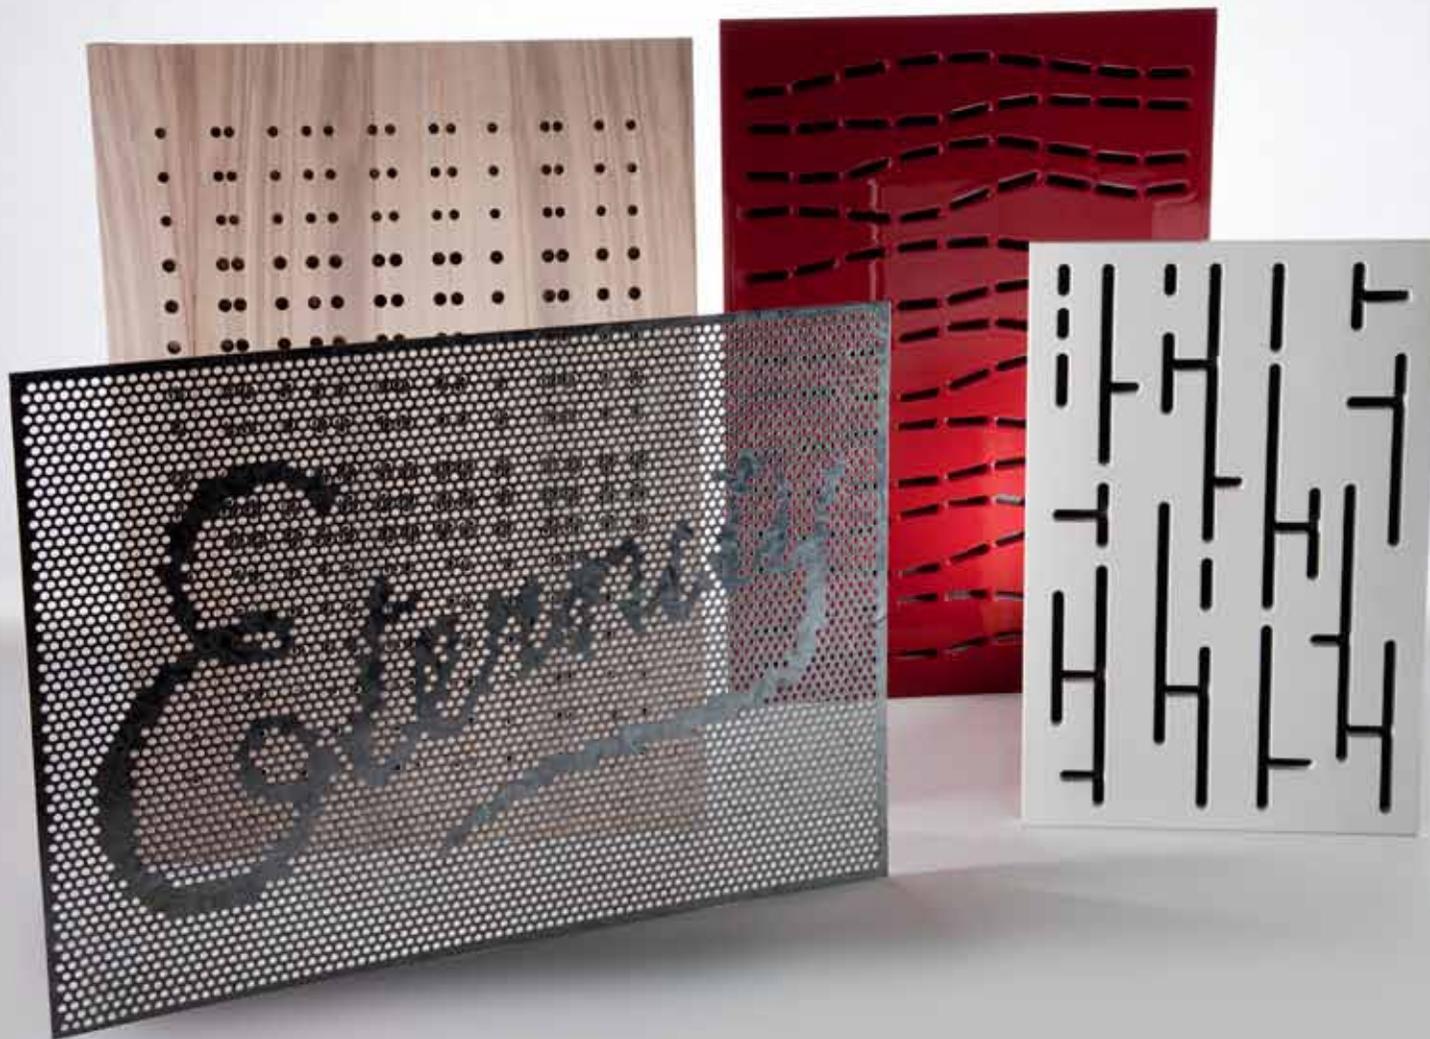

Architects and designers have been asking for a solution to this dilemma, and the team at Decor have developed a previously inconceivable concept to fulfil their wishes. Smooth walls and ceilings create the perfect canvas for feature pieces, art, sculpture and lighting. The very essence of minimalist design, popular in contemporary architecture, can be captured through Decor's range of smooth panel styles.

BESPOKE

We work with our customers on a conceptual level, building solutions with all their needs at heart. Our knowledgeable team nurture and support the visions and concepts of architects and designers. In our world, anything is possible. And things we once thought were impossible, we've now proved to ourselves are in fact possible with the right team, determination and will. Custom patterns, logos, typography, colours, and sizes: we make it happen.

Style

BESPOKE

Influential architecture and design is all about creativity. The most impressive outcomes often stem from original ideas, never seen before anywhere in the world.

Decor encourages creativity and originality through bespoke panelling solutions. The beautiful range, though extensive, is not comprehensive, and allows room for unique designs and signature styles to be born. Decor offers a mood board where designers can compile a blend of design elements, custom imagery, typography and more, and work with the Decor design team in conceiving a totally original panel. In some cases, Decor can protect bespoke designs, never reproducing them so they remain truly unique to you, and cannot be found anywhere else in the world.

BENEFITS

Our products are not only incredibly functional, but also extremely fashionable, and contribute greatly to the ambience of a space. In a busy world, sometimes a quiet room makes all the difference. As we travel around the world, we see all kinds of beauty, hear new sounds, experience true tranquillity and learn about the human life. We believe in framing these scenes of life with the finest environment possible because, when it comes down to it, we have a responsibility to our build environment and to future generations.

Style

LINEAR

Linear styles have the potential to elongate a space, creating optical illusions of length or height.

Linear panels, being channelled rather than perforated, often go unnoticed as acoustic management tools. Within the Decor range, linear panels offer impressive acoustic ratings, with open area specifiable up to 25%. Manufactured from various timber substrates and available in an assortment of widths and finishes, linear panels are an excellent choice for abundant benefits, green ratings, and winning style.

EFFICIENT

We work hard to minimise lead times and get projects looking amazing, fast. Having worked in the industry for decades, we know about time-pressure, and have built systems to accommodate fast-paced work practices. We guarantee a same-day proposal, getting quotes and specifications to customers in a matter of hours. We are able to do this through processes, discipline, and nearly 50 years of practice.

Style

SLOTTED

Slotted panels, with their elongated perforations have the ability to create length within an area, whilst creating a contemporary design outcome.

High percentage open areas create efficient acoustic control, which can be increased even further through backing the panels with the new and innovative Sonus acoustic textile. Slotted panels are also available in a range of highly efficient pre-finished designs, for immediate delivery at reduced costs, allowing your budget to stretch further in other areas of the building.

SERVICE

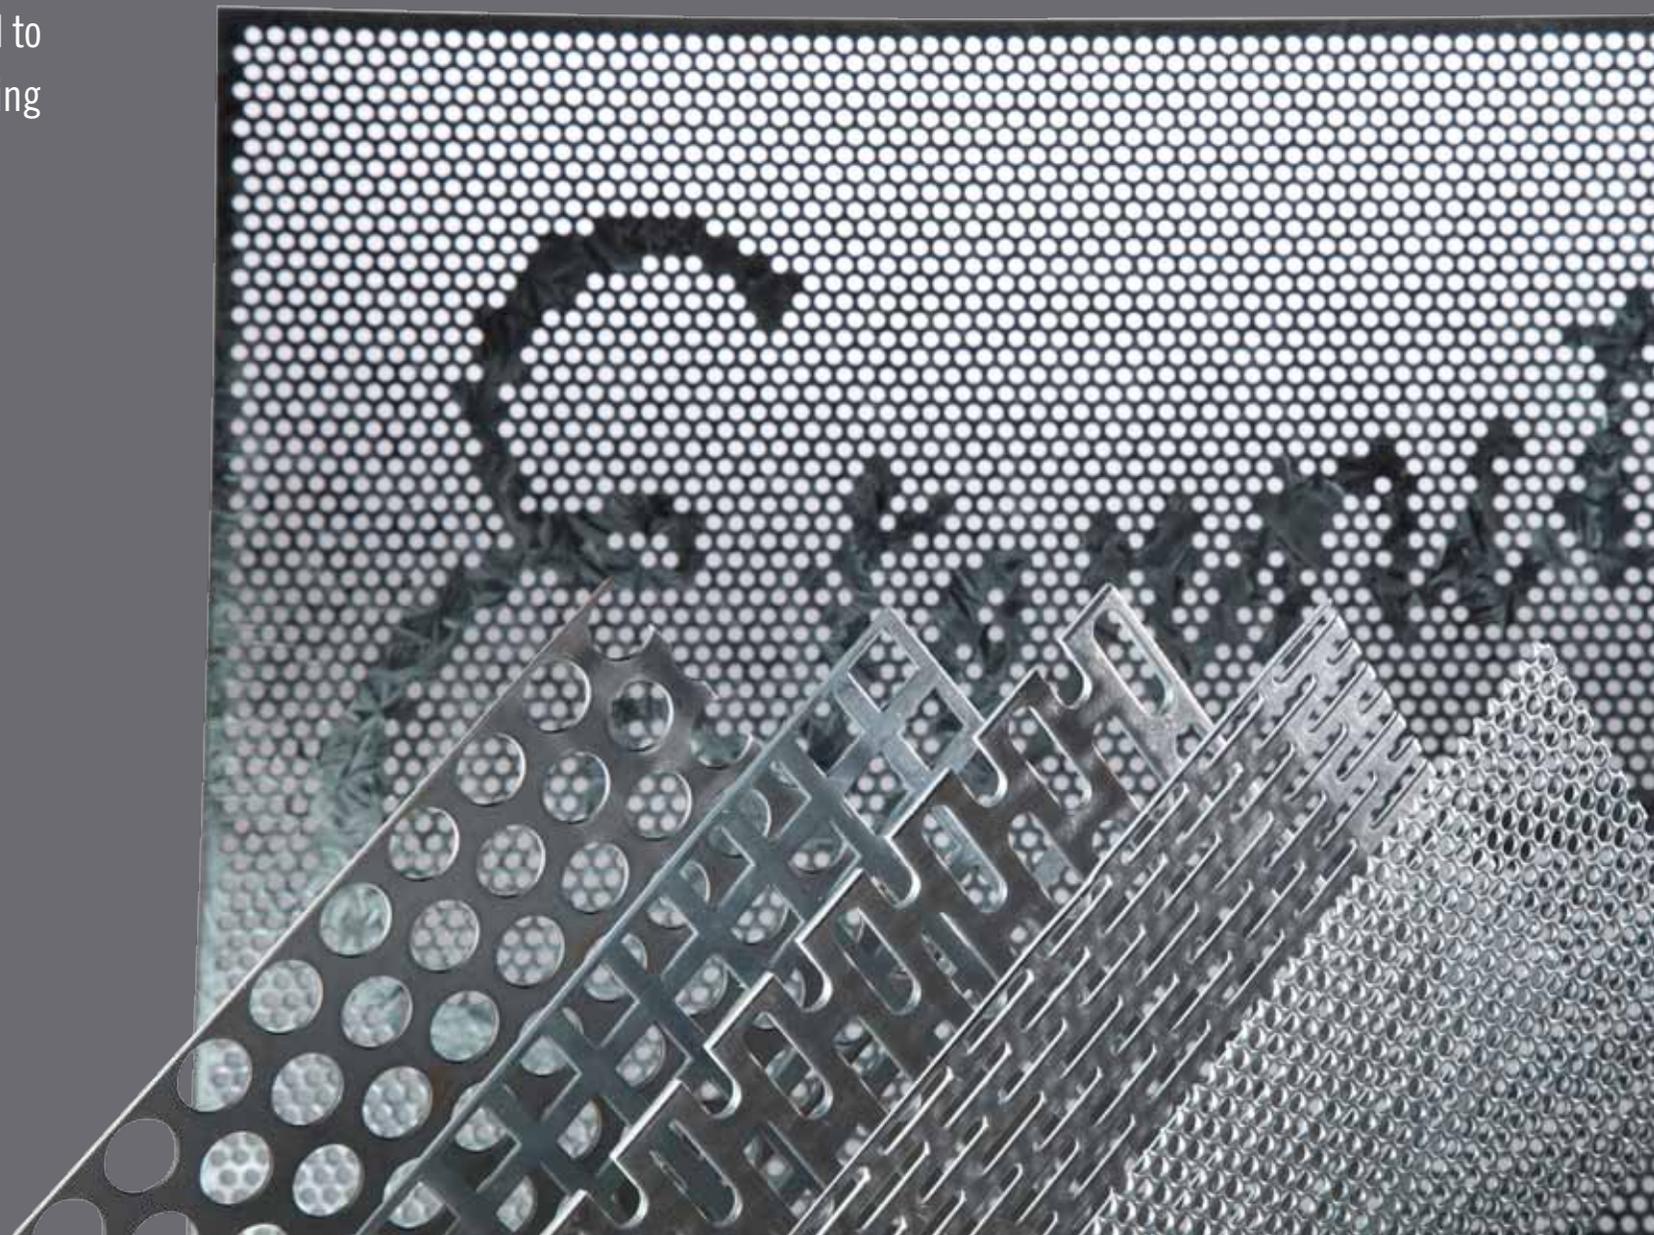

We pride ourselves on being highly responsive to all of our customers, all the time. Whilst our products are quite remarkable in their own right, our service is what really makes us the most enjoyable to work with. We are true to our word, and deliver what we promise. Part of our ongoing service includes a lifetime guarantee on our products, because we want you have confidence in your decision, always. Our national distribution channels mean you can enjoy all the benefits of Decor products, wherever you are.

Style

METL

Metal panels have always been associated with exteriors, used for screening, security and safety. Always looking for new ways to interpret classic elements, Decor have developed a style aimed at bringing metal to interior decor, and creating metal feature pieces as opposed to contextually expected applications.

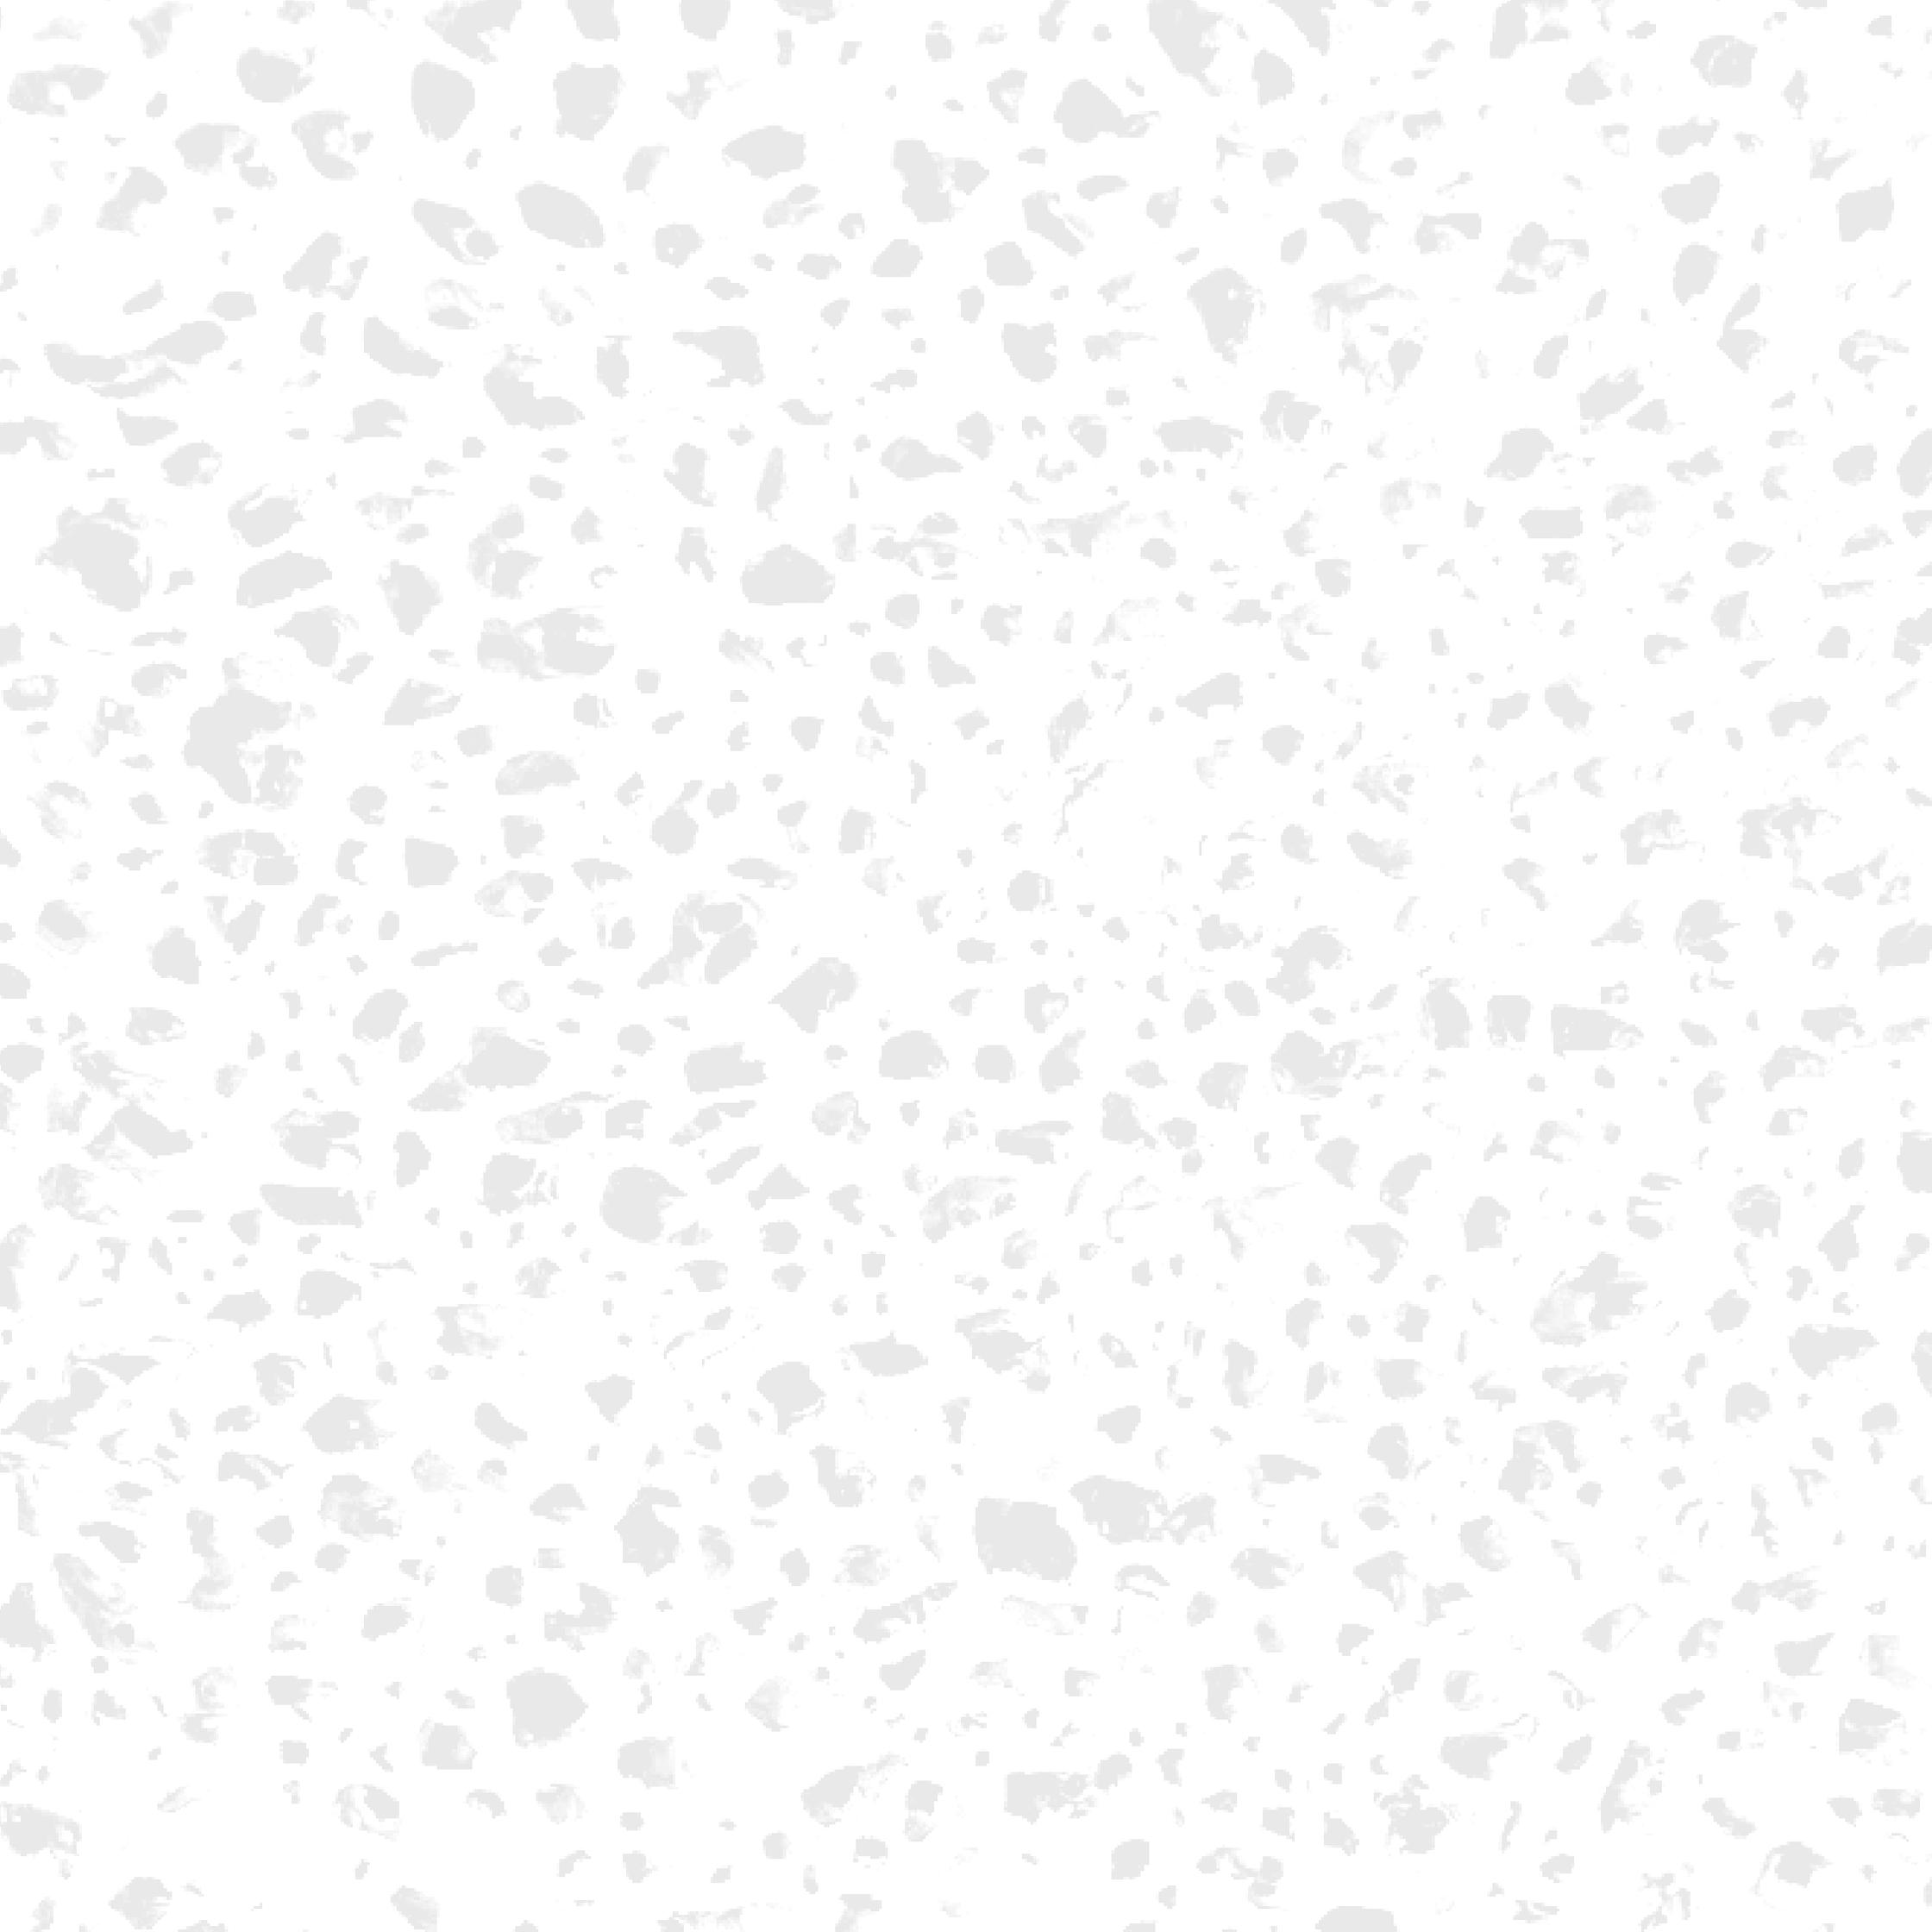

Perforated metals are the newest innovation to hit the architectural industry, and with Decor's artistic customisation services, metal has become a signature canvas for an innovative group of bold designers. The Decor Metl collection works beautifully with creative lighting effects, utilising the natural attributes of the metals. Other projects have seen the perforated metals designed for the sun, casting patterns and shadows across sprawling atriums.

GREEN

We truly care about minimising our impact on the environment, and hold accreditations from FSC and GECA. We support our customers' wishes to be environmentally considerate, offering solutions with maximum environmental ratings. Our products have been installed in notable green buildings around the country, leading the way for sustainable architectural outcomes.

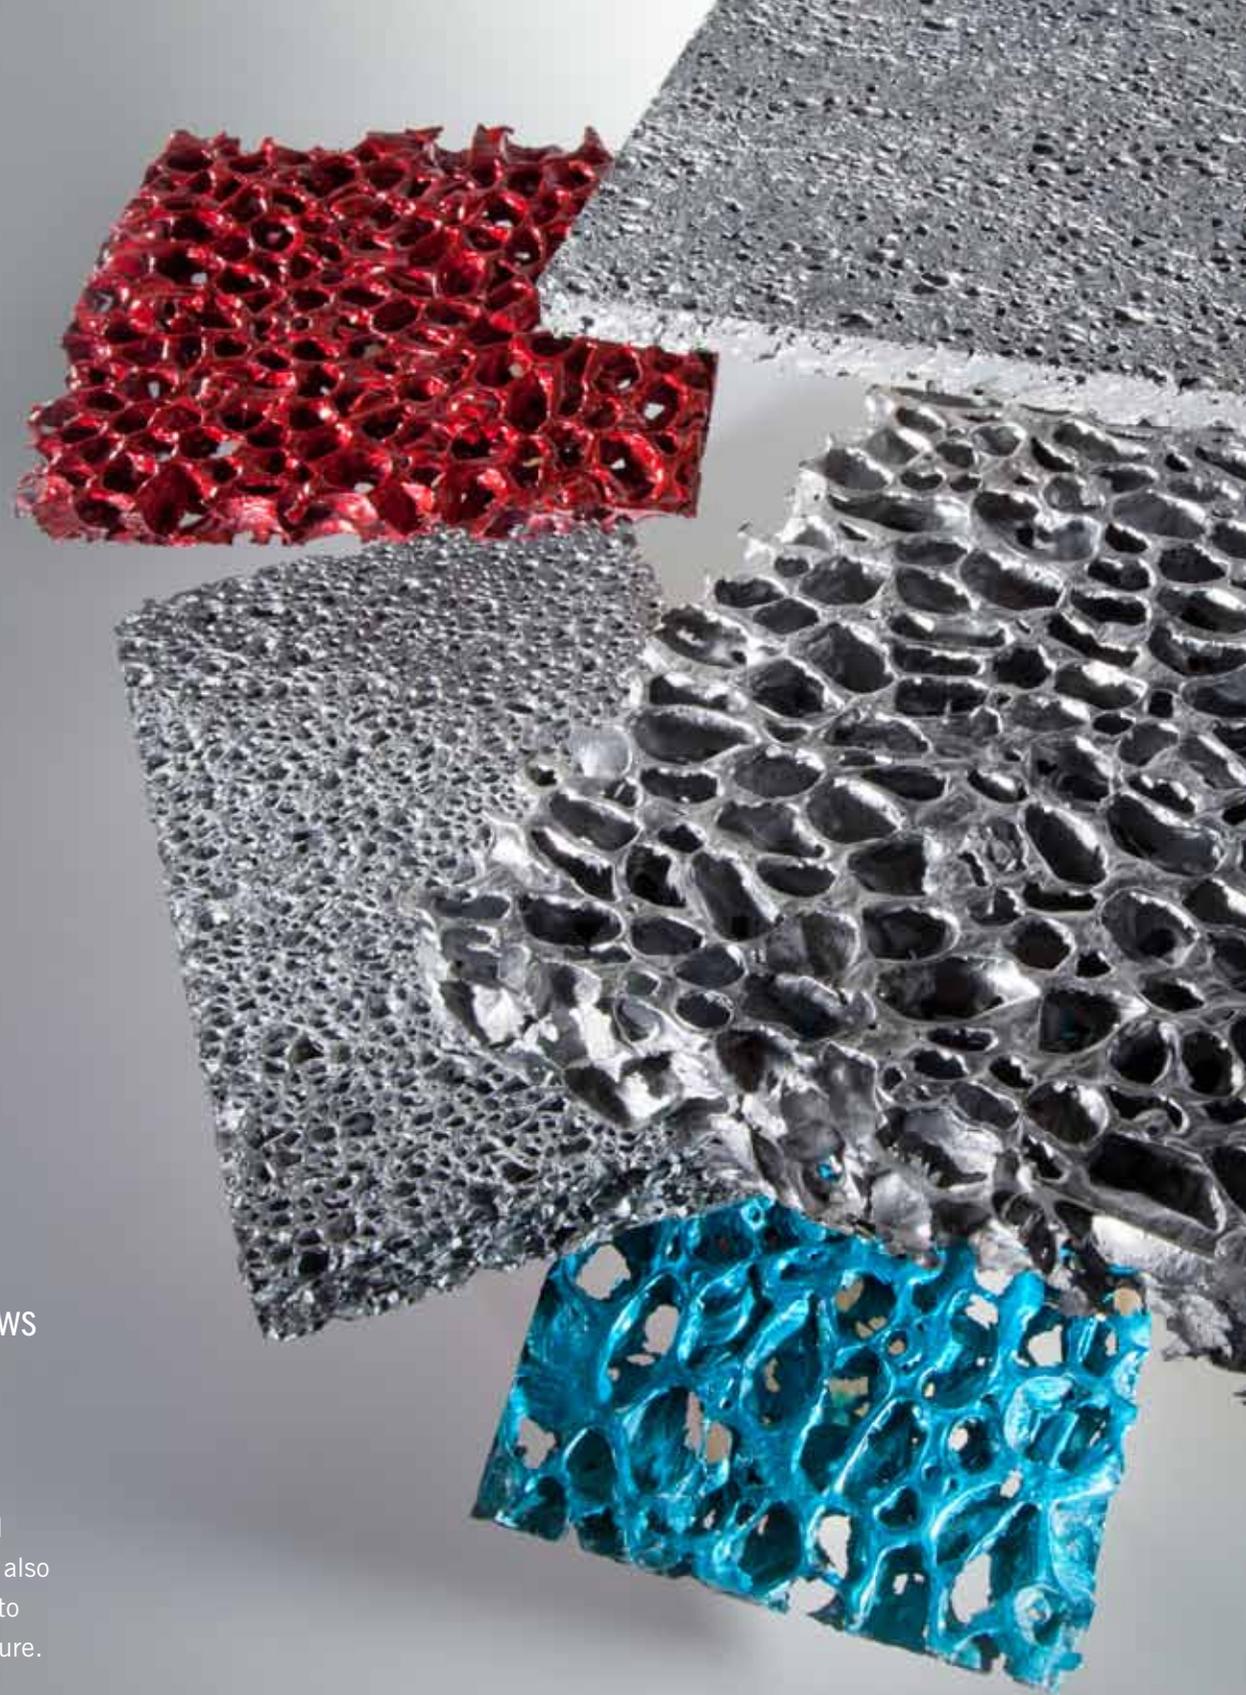

Style

LUNAR

The lunar style refers to innovative metal products, which resemble other worldly substances. The lunar style is greatly enhanced by direct lighting, highlighting the metallic reflection and deep shadows created by the unique formation of the panels.

The most captivating of all Decor styles, the products also offer acoustic ratings due to their hollow cellular structure. The panels are agreeable to sustainable practice and contribute to green ratings, as they are made from recycled metals. Despite the recycled materials the lunar style is a very new concept, available to the most daring designers craving something truly different.

HERITAGE

Everything that we do is based on three generations of learning, experimentation, industry experience and distilled passion. Despite travelling the world to observe architectural trends and development, we remain true to our heritage, manufacturing all our products right here in Australia. We work together, and call upon industry experts with years of experience to ensure you receive expert advice across acoustic management, design, installation, product maintenance, and sustainability.

Style

SLATS

History proves the appeal and allure of timber slats, and some projects simply call for them. Rich and raw, they create feelings of nature and warmth, and can be used to construct light modern spaces or rustic masterpieces.

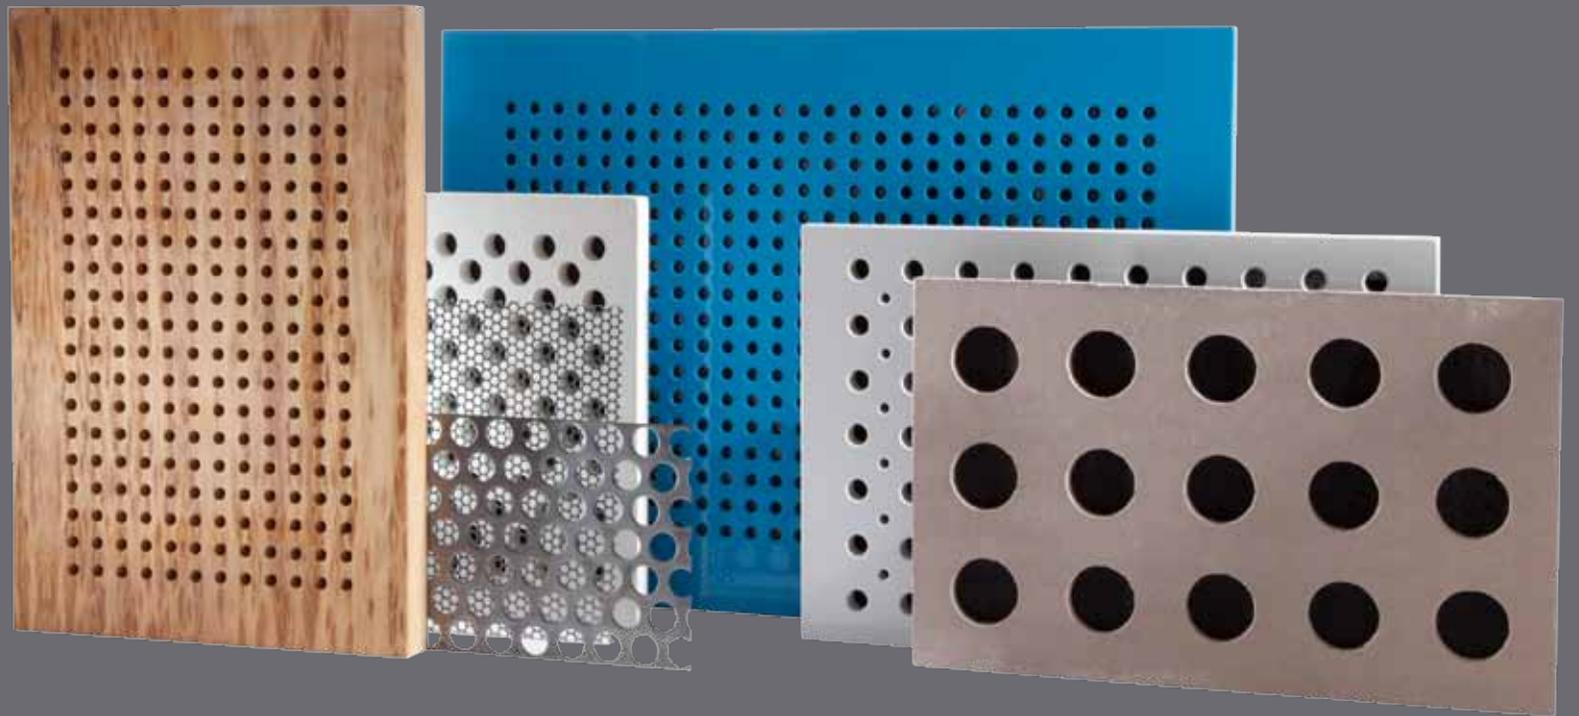

Decor offers an exciting range of pre-finished timber veneer and timber-look options, as well as an endless variety of decorative finishes. Decor's heritage has seen timber slats remain a staple product, developing modern applications for slats, creating continuous linear effects and backlit feature pieces.

PEOPLE

We are proud to belong to the family who began the acoustic panelling market in Australia, and who lead the way for technological advancements and design. For three generations we have worked hard to discover more sustainable and efficient panel techniques to minimise incidental noise and maximise design appeal. Passionate as ever, we personally check the quality of every panel that leaves our factory, signing our name to the quality of each.

Style

CIRCULAR

The original acoustic panel, the Decor team invented this style almost 50 years ago. Respected as a classic, the circular design can be found in architecture the world over, in timeless designs that will never go out of fashion.

Many of these designs feature structured patterns, yet the design team at Decor have taken circular perforations to a new level. Designing custom perforation patterns to create complex shapes, the acoustic function of circular perforations can be transformed into a visual feature of any space.

DECOR ONLINE

A hub of inspirational design and architectural wonder, the Decor websites across desktop, tablet and mobile are logically structured, interactive digital tools designed for the construction and design industries. With handy product filters, finding and specifying the right product couldn't be simpler. Gather ideas from leading Australian and international architects, designers and artists by viewing the world's most recent and most beautiful projects.

If you find yourself brainstorming for creative solutions in a meeting, the tablet website is perfectly designed for collaborative thinking over an iPad. Similarly, if you are on-site or need technical information on the go, the mobile site offers a handy pocket-sized design resource so you will always have the answers. With tailored services available to architects, designers, acoustic consultants and building contractors, there really is something for everyone on the Decor websites.

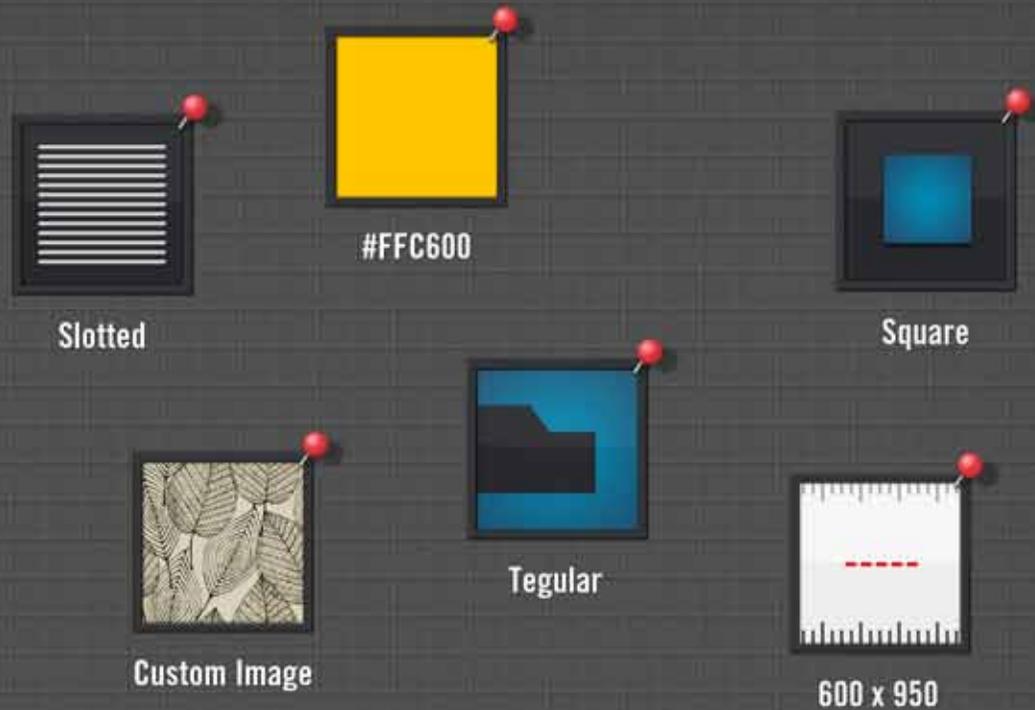

www.decor systems.com.au

VISION BOARD

For those looking for truly original design outcomes, the Decor Vision Board now available on the Decor website, offers a vision-building platform that captures everything from imagination to specific details. Providing boundless creative freedom, the Vision Board prompts users to select from a variety of shapes, sizes, substrates, acoustic ratings, finishes, colours and more. The Vision Board can then be submitted to the product designers at Decor, who offer a bespoke solution within hours. With creativity running a fabulous rampage, no two outcomes may ever be the same.

RESOURCES

At Decor, we understand all the planning that goes into architectural mastery. Sometimes the smallest things can make all the difference. Our libraries of architectural and acoustic resources are available to you, to ensure the result you get is exactly what your heart had imagined.

We have conducted countless acoustic tests on our panels to develop visual representations that help inform you about the performance of each. Reference the absorption coefficients of your favourite products quickly and easily with our Acoustic Outcomes Guide, available from your project team at Decor.

Save your imagination for the big things, with full-scale perforation guides that show you exactly how your acoustic patterns will look. With calculated open area percentages listed, you know exactly what you're specifying. Talk to your project manager about getting your copy of the Perforation Modules Guide.

WHAT IS SONUS?

An acoustic textile like nothing of this time, Decor Sonus is a true leader in acoustic control and noise reduction. Engineered for a superior composition, the fabric uses its thickly woven fibres to form a barrier against microorganisms and dust particles. Teaming Decor Sonus with your acoustic panels protects your built environment, ensuring it remains the sensory pleasure you had always imagined it to be. Like all Decor products, Decor Sonus is quality-guaranteed forever under our Legacy Covenant, aligning your name with quality, now and into the future.
